1896 Hamilton Wright Mabie If the writer who ventures to say something more about books and their uses is wise, he will not begin with an apology; for he will know that, despite all that has been said and written on this engrossing theme, the interest of books is inexhaustible, and that there is always a new constituency to read them. So rich is the vitality of the great books of the world that men are never done with them; not only does each new generation read them, but it is compelled to form some judgment of them. In this way Homer, Dante, Shakespeare, Goethe, and their fellow-artists, are always coming into the open court of public opinion, and the estimate in which they are held is valuable chiefly as affording material for a judgment of the generation which forms it. An age which understands and honours creative artists must have a certain breadth of view and energy of spirit; an age which fails to recognise their significance fails to recognise the range and splendour of life, and has, therefore, a certain inferiority.

This book investigates Web search from the non-technical perspective, bringing together chapters that represent a range of multidisciplinary theories, models, and ideas.

2018-10-02 Krisztian Balog This open access book covers all facets of entity-oriented search—where “search” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

2023-01-19 Allyson Shaw 'Beautiful... A moving reminder for us all to connect with what's gone before' STYLIST A moving and personal journey, along rugged coasts and through remote villages and cities, in search of the traces of those accused of witchcraft in seventeenth-century Scotland. In Ashes and Stones we visit modern memorials and standing stones, and roam among forests and hedge mazes, folklore and political fantasies. From fairy hills to forgotten caves, we explore a spellbound landscape. Allyson Shaw untangles the myth of witchcraft and gives voice to those erased by it. Her elegant and lucid prose weaves together threads of history and feminist reclamation to create a vibrant memorial. This is the untold story of the witches' monuments of Scotland and the women's lives they mark. Ashes and Stones is a trove of folklore linking the lives of contemporary women to the horrors of the past, a record of resilience and a call to choose and remember our ancestors. 'Allyson Shaw has built a monument in words to the thousands persecuted as witches in Scotland. A fascinating and necessary book.' 2012-08-01 Harry Halpin Social Semantics: The Search for Meaning on the Web provides a unique introduction to identity and reference theories of the World Wide Web, through the academic lens of philosophy of language and data-driven statistical models. The Semantic Web is a natural evolution of the Web, and this book covers the URL-based Web architecture and Semantic Web in detail. It has a robust empirical side which has an impact on industry. Social Semantics: The Search for Meaning on the Web discusses how the largest problem facing the Semantic Web is the problem of identity and reference, and how these are the results of a larger general theory of meaning. This book hypothesizes that statistical semantics can solve these problems, illustrated by case studies ranging from a pioneering study of tagging systems to using the Semantic Web to boost the results of commercial search engines. Social Semantics: The Search for Meaning on the Web targets practitioners working in the related fields of the semantic web, search engines, information retrieval, philosophers of language and more. Advanced-level students and researchers focusing on computer science will also find this book valuable as a secondary text or reference book.

1980-12 K. Haley The NATO Advanced Research Institute on Search Theory and Applications was held at the Hotel Algarve in Praia Da Rocha, Portugal, from March 26 through March 30, 1979, and was sponsored by the NATO Special Programme Panel on Systems Science. There were forty-one participants representing a wide range of backgrounds and interests. The purpose of the institute was to bring together people working in search theory and applications with potential users of search techniques to stimulate the increased application of recently developed search technology to civilian problems such as search and rescue, mineral exploration, surveillance, and fishing. Conversely, it was felt that by exposing search analysts to potential applications and new problems, they would be stimulated to develop new techniques for these applications and problems. The exchange of ideas and problems necessary to accomplish these goals was provided in the meeting workshops. There were three workshops, Search and Rescue, Exploration, and Surveillance and Fishing, each consisting of a small group of search analysts and potential users working together to define areas in which search theory and technology can be applied and to outline plans for implementation. At the end of the conference, each working group submitted a report outlining possible areas of search applications and discussing problems which needed to be solved in order to implement these applications.

2000 Sharon L. Wolchik This comprehensive book focuses on the challenges facing Ukraine as a newly emerged state after the collapse of the Soviet Union. Like all countries with no recent history of independence, Ukraine had to invent or recreate effective political institutions, reintroduce a market economy, and reorient its foreign policy. These tasks were impossible to accomplish without resolving the question of national identity. In this balanced and clear-eyed assessment, a team of U.S. and Ukrainian specialists explores the external and internal dimensions of national identity and statehood, providing a wealth of information previously unavailable to Western scholars. Arguing that the search for national identity is a multidimensional process, the authors show that it reflects the realities of the dawning twenty-first century. Paradoxically, this quest must cope with the both the weakening of state boundaries caused by globalization and the strengthening of the national model as new countries emerge from the disintegration of the Soviet Union and Yugoslavia. After providing the historical context of Ukraine's international debut, the book analyzes the complexities of constructing a national identity. The authors explore questions of ethnic relations and regionalism, the development of political values and attitudes, mass-elite relations, the cultural background of economic strategies, gender issues, and the threat of organized crime to emergent civil society.

2000 Ernst A. Heinz This book presents the results of our past two-and-a-half years of research aimed at increasing the scalability and performance of game-tree search in computer chess. We elaborate on our respective works in the areas of (I) selective forward pruning, (II) the efficient application of game-theoretical knowledge, and (III) the behaviour of the search at increasing depths. The broad range of topics covered by the three distinct parts of the book seek to provide interesting material for everybody interested in the field of "Computational Intelligence", regardless of their individual focus (researcher, student, or other). The text does not require readers to know about chess and computer game-playing beforehand. The initial chapter entitled "Computer-Chess Primer" introduces all the necessary basics and fundamentals thereof. The remaining chapters, however, go far beyond those topics. They show how to make sophisticated game-tree searchers still more scalable at ever higher depths. Throughout the whole book, our high-speed and master-strength chess program DARKTHOUGHT serves as a realistic test vehicle to conduct numerous experiments at unprecedented search depths. The extensive experimental evaluations provide convincing empirical evidence for the practical usefulness of the techniques presented by us. These results will certainly be of special interest to researchers and programmers of computer strategy-games alike (chess, checkers, Go, and Othello in particular). Last but not least, I like to mention that I am most grateful to the series editors for offering me the opportunity to publish my book under their auspices.

2014-09-10 Ibrahim Haji Seminar paper from the year 2013 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: B, The University of Chicago, language: English, abstract: The findings of the study are well consistent with close-cut studies of other companies offering hospitality services online. According to Harcar and Yucelt (2012), perceived convenience ranked highest in explaining the consumers' search intention as a dependent variable and as if that is not enough, the same research findings did hold ground for another rather distanced online travel company as can be justified by the fact that perceived convenience by the consumer made the highest contribution in affecting consumers' search intention while their were searching for their services (Peng et al, 2013). These findings were again consistent with of another scholar who in his studies, discovered that perceived convenience had much contribution to make on the customers' search intention (Conyette, 2012). On the other hand, the attitude of the consumer as far as his/her search intention is concerned also gave relatively considerable contribution. The findings of the study place the attitude of the consumer as the second strongest factor likely to affect the search intention of consumers and according to another research, the attitude of the consumer played a great role in affecting the consumer in his/her search intention as far as online travel is concerned (Khandelwal et al, 2012). It is explained that the consumer's attitude has a great effect on the consequential bearing of his search with regards to making reservations online of buying hospitality services online. This study finding is consistent with other studies and much more matches the expectations of stakeholders in this industry who without prior knowledge of customers' preferences and intentions, can not really compete in the industry (Park et al). Knowing the attitude of the consumer and understanding that this attitude would affect his/her search intentions is key to making any online travel business successes (Jha, 2014). Intensive research placed subjective norm on the lower end of affecting consumers' search intention when compared with perceived convenience and consumers' attitude all through the study. [...]

1987-01-29 Israel Gershoni Throughout the 20th century, Egyptian nationalism has alternately revolved around three primary axes: a local Egyptian territorial nationalism, a sense of Arab ethnic-linguistic nationalism, and an identification with the wider Muslim community. This detailed study is devoted to the first major phase in the perennial debate over nationalism in modern Egypt--the territorial nationalism dominant in Egypt in the early 20th century. The first section of the book examines the effects of World War I and its aftermath, which temporarily gave rise to an exclusively Egyptianist national orientation in Egypt. Subsequent sections consider the intellectual and political dimensions of Egyptian interwar years. Egypt, Islam and the Arabs is the first volume in a new Oxford series, Studies in Middle Eastern History. The General Editors of the series are Bernard Lewis of Princeton University, Itamar Rabinovich of Tel Aviv University, and Roger M. Savory of the University of Toronto.

2010-04-02 Paul Davies One of the world's leading scientists explains why—and how—the search for intelligent life beyond Earth should be expanded. Fifty years ago, a young astronomer named Frank Drake first pointed a radio telescope at nearby stars in the hope of picking up a signal from an alien civilization. Thus began one of the boldest scientific projects in history, the Search for Extraterrestrial Intelligence (SETI). After a half-century of scanning the skies, however, astronomers have little to report but an eerie silence—eerie because many scientists are convinced that the universe is teeming with life. Physicist and astrobiologist Paul Davies has been closely involved with SETI for three decades and chairs the SETI Post-Detection Taskgroup, charged with deciding what to do if we're suddenly confronted with evidence of alien intelligence. He believes the search so far has fallen into an anthropocentric trap—assuming that an alien species will look, think, and behave much like us. In this provocative book Davies refocuses the search, challenging existing ideas of what form an alien intelligence might take, how it might try to communicate with us, and how we should respond if it does.
